

# BLOKADE

Perimeter security with real teeth

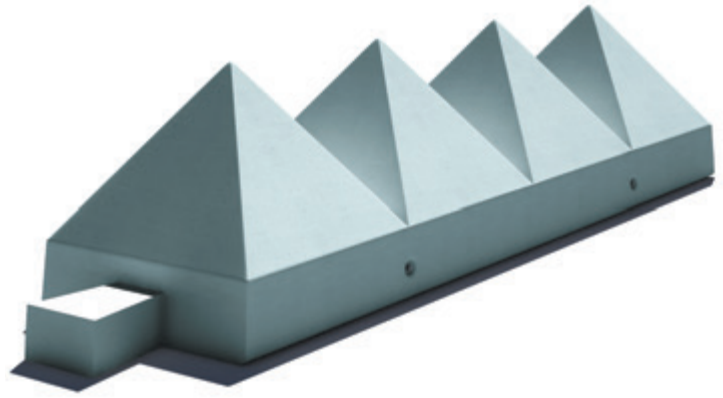

When you need complete, cost-effective perimeter security, you need new Blokade.

Its pyramid shapes have been specially designed to prevent any size vehicle being driven over them without being impaled. Each 5.2 tonne unit of four 1-metre square pyramids features unique, interlocking connectors that just slot into place, making this a simple, secure anti-terrorist system - however long the site perimeter.

# BLOKADE

Blokade is made from smooth, self-compacting concrete that's resistant to freeze/thaw attack to international standard XF4 with a design life of at least 60 years, so you can rely on it to be effective for many decades to come.

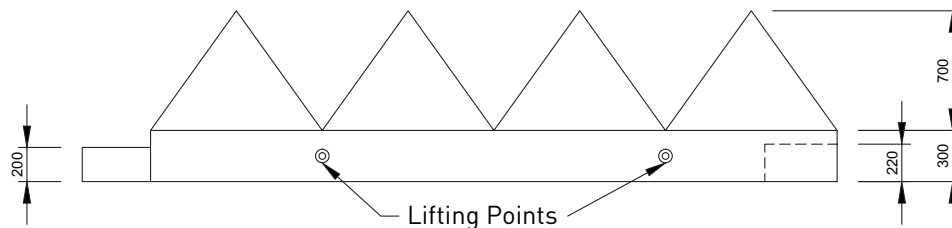

So whether it's to prevent vehicles being stolen or vehicular terrorist attacks, give your security real teeth. With Blokade from Kijlstra.

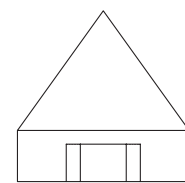

- Elegant design and proved functionality over several decades
- 4 anchors so can be easily installed directly from truck on site
- Interlocking system for extra security
- Made of self compacting concrete so highest visual quality with smooth finish
- Highest exposure class XF4 on freeze/thaw attack: for exposure to de-icing agents and freezing.

- Unique interlocking design
- Simple installation
- 1m-high pyramids impale vehicles
- 4-pyramid 5.2 tonne modular units
- Four integral lifting points
- Ideal for MoD, power stations, airports, ports, rail yards and factories
